NOV 19 1957

1. The attached change request is forwarded for your evaluation and recommendation.

2. It was the understanding of this office that adequate quantities of standard commercial quality testing equipment would be provided by your organization to meet anticipated programs and which would satisfactorily produce a product meeting mission requirements.

3. If it is believed that the equipment provided is adequate, perhaps additional instruction in its proper utilization may be indicated.

1. The equipment of items 2 through 5 is recommended for inclusion in SLOE for each detachment and the Test Site. Specific description of the equipment should be established by Eastman Kodak since they furnished the 70 mm processor and presumably would furnish associated equipment.

2. The requirement for item 1, Kodak Process Control Sensitometer, Model 101, should be evaluated by Eastman Kodak in light of their current program to improve and to increase the accuracy of the control of the 70 mm processing. Sensitometer 735602-005 now in [REDACTED] (item 4-0453) provides simple first order gamma control. It is possible that more complex equipment is required to permit tighter control of the processing. We will undertake further study of the calibration and tolerances of the Hycon Sensitometer 735602-005 using the one from Detachment A.
